NOTICE OF ALLOWANCE

Status of the Claims

This action is in response to papers filed 2 November 2005 in which claim 8 was amended and a declaration under 37 C.F.R. § 1.132 was submitted. The amendments have been thoroughly reviewed and entered.

The previous rejections in the Office Action dated 20 July 2005 under 35 U.S.C. 112, second paragraph are withdrawn in view of the amendments. The previous rejections under 35 U.S.C. 103(a) are withdrawn in view of Applicant's comments in ¶ 15-17 of the response and the declaration. The amendments and arguments define the claimed invention over the prior art and place the claims in condition for allowance.

Claims 8, 10-11 and 14-15 are in condition for allowance.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The claims are drawn to a method of hybridization within a reaction cell that is centrifuged and agitated at the same time. The centrifugation is at a force greater than 1G and the axis of agitation is more orthogonal to than parallel to the axis of centrifugation. The prior art of Roberts teaches hybridization with rotation and "sloshing" wherein the sloshing is provided by placing the reaction cell at an angle relative to the axis of rotation (Column 8). While Roberts teaches rotation, they do not teach or suggest centrifugation at greater than 1G. The prior art of record does not teach or suggest the combined centrifugation and agitation as claimed.
